

THE BUSINESS OF MEDICINE

CONNECTING PHYSICIANS TO THEIR EMR

Electronic interfaces save time and improve patient safety by eliminating the need for redundant data entry between systems. Once in place, the process is seamless—you won't even realize that an interface exists! **Lytec Communications Manager** is an HL7 compliant solution that can interface with many Electronic Medical Record (EMR) systems.

This two-way interface allows Lytec to send registration and scheduling information to your EMR system of choice. Billing information is sent from your EMR system and received directly back into Lytec so your CPT and ICD 9 information is carried through the entire process.

New initiatives for EHR's (Electronic Health Record) make **Lytec Communications Manager** a more popular choice than ever before. There's no better way to ensure accuracy of data between systems than by initiating direct communication between Lytec and your EMR system. By removing the potential for transcription errors and eliminating the need for your staff to spend valuable time with duplicate data entry, your return on investment is easily realized.

If you are currently using another EMR solution, we can adapt that solution for you. By working with our Certified Partners, we can seamlessly integrate your current solution with our interface. EMR vendors come to Lytec because they know we have the skills, the resources and the creativity to get the job done.

HL7 Integration currently available with our Certified Partners:

If you have an EMR partner already in place, they can call us at
1-800-333-4747 to customize your interface.
